The increase in the number of confirmed cases in Australia shows a definite slowing down.

If interstate travel restrictions remain in place, and the rate of increase continues to drop,

it looks as if it would be sensible to ease intrastate travel restrictions in some states or territories in another week or two.

So far, the NT has not recorded a single case of community transmission.

Looking at the international figures, the death rate among confirmed cases has risen in every case where I have figures.

I've added a number of countries so they now include all the countries where we've offered trips in the last ten years.

Austria and Denmark were considering easing restrictions so it will be interesting to see how they go.

Indonesia, Singapore and India are neighbours, two of which don't have great medical infrastructure. Worth watching.
