

The wet season is SPECTACULAR!!

Don't believe what you see on TV weather reports. Weather symbols designed for temperate climates don't work for the tropics.

January, our wettest month, is far from the hottest. Most rain comes in short, sharp bursts. Sydney gets more 35° days than Darwin. We average sunny skies 45% of the time, almost as much as Sydney's 50%.

Don't believe it? The met bureau links on our wet season information page will let you judge for yourself.
